

Anti-Conjugated N-Acetyl-Cysteine

Product Information Sheet
1062GE

SUMMARY

shipped on blue ice; store at -20 °C

For research use only.

Not for use in diagnostic or therapeutic procedures.

Description

Polyclonal antisera were raised in rats after immunization with the conjugate: N-Acetyl-Cysteine adsorbed on proteins.

Contents: The antibody is supplied in a unit size of 50 µl in PBS with 50% glycerol.

Storage and Handling

When this product is stored undiluted at -20 °C or lower, it is stable for at least 2 years. Multiple freezing and thawing is only possible up to 5 times. The antibodies can be prediluted 10x in PBS containing 0.1% merthiolate or a mixture of PBS/glycerol (1:1, vol./vol.). At 4 °C these solutions are stable for 2 months.

Specificity

Using a conjugate N-Acetyl-Cysteine protein, antibody specificity was determined in an ELISA test by competition experiments with the following compounds:

Compound	Cross-reactivity ratio ^(a)
N-Acetyl-Cysteine-BSA	1
Cysteine-G-BSA	1: >100,000
Cysteine-GA-BSA	1: >100,000

(a): N-Acetyl-Cysteine-BSA concentration / concentration of unconjugated or conjugated close-related compounds at half displacement;

G = Glutaraldehyde, GA = Glutaric Anhydride, BSA = Bovine Serum Albumine

Recommended dilution

The anti-conjugated N-Acetyl-Cysteine antibodies can be diluted 1:2,000 to 1:5,000.
